L3: Entry 1 of 1

File: USPT

Nov 11, 2003

DOCUMENT-IDENTIFIER: US 6647374 B2

TITLE: System and method of assessing and rating vendor risk and pricing of technology delivery insurance

Detailed Description Text (46):

The overseas insurance company 84 would underwrite the local risk and establish formal parameters under which they would take on a negotiated portion of the operational risk related to completion of the project. The overseas rating agency 92 would conduct a due diligence review of the perspective software vendor 82, after which a rating would be issued. Armed with this rating, the overseas insurance company 84 would underwrite the project and provide the U.S. insurance company 86 with a "first loss" protection layer in the form of a surety bond. The latter would then "wrap" the foreign based reinsurer with a secondary performance bond by and between itself and the U.S. customer. Before the U.S. insurer could be called upon to pay on a default claim, the primary policy would have to be fully drawn. The U.S. customers would be relying solely on the secondary policy.
